

Healthcare Series Enhancements

The enhancements make searching simple, instantly giving clinicians relevant answers.

Floating document outline

No matter where you scroll within a document, this 2-level outline “floats” in the left-hand margin. With it, you get one-click access to any other section within the document.

Exact match keyword searches and streamlined path from search to document

Get quicker access to the documents you need. This streamlined process means you find more precise search results in fewer clicks.

Full-text search by document section

Now you can be even more specific with your search. (Example – “find everything with X in the clinical effects section.”)

Tabular display of drug information

Easily locate pertinent drug details on both trade and generic products. These tables break information into useful segments.

Tabular display of toxic substances

You can sort through product names, active ingredients, and imprint codes thanks to this helpful new tabular format.

Comparative drug summaries

Quickly compare specific information such as dosage or side effects for two or more drugs. And to further simplify this process, a new multi-level Therapeutic Class Tree Search allows you to search for drug options within a drug class.

New drug identification tool

Instantly identify drugs by searching on physical characteristics such as imprint code, shape, color, and pattern. And with color images, you get definitive confirmation.

Enhanced drug interaction and IV compatibility searching/reporting

Cross-check multiple drugs in a single search. You get all the relevant data at once. Plus, results are color-coded and prioritized so you can quickly avoid adverse drug events.
