

QUICK TIP

#10 EASY SEARCH FOR USEFUL CONSULTATIVE INFORMATION

Finding practical DRUGDEX® consultative information is a snap in both the Point-of-Care Interface and the Micromedex® Healthcare Series.

For example, typing the word “comparative” in the search box and either clicking “Run In-Depth Search” in the Point-of-Care Interface, or running a straight “Keyword Search” in Healthcare Series provides several Comparative Dosage Tables under DRUGDEX Consults.

Or, similarly searching the word “crushed” provides a DRUGDEX consult on drugs that should not be crushed. You can find other DRUGDEX Consults by searching one keyword included in the title of any consult.
